

# Fatigue Risk Management Solutions to meet ISPO requirements

Peter Page, Managing Director

## Our Unique Approach

The capability InterDynamics' offers our clients is unique.

By providing both decision support solutions and risk-based fatigue management, we can deliver holistic solutions to both operational and strategic business challenges.

# Agenda

1. ISPO requirements
2. Tools we need
3. Human Fatigue
4. FAID
5. Fatigue Risk Management
6. Examples of:
  - i. FAID Diagnostic
  - ii. Questionnaire
  - iii. GRAID FRMS
  - iv. FHA

# International Standard for maritime Pilot Organizations

## 8.2 Pilot Scheduling

8.2.1 The pilot organization shall for the **purpose of managing fatigue, alertness and endurance** in pilotage services:

- maintain rules or instructions to ensure that the maritime pilot will **not be required to be on duty for excessive hours**;
- establish a monitoring system for working hours to identify deviations from the regular work time and to control rules or instructions;
- ensure that all maritime pilots work under conditions as required by local, national or international rules and regulations and
- **set up a system that allows maritime pilots to be released from duty before their work is impaired by fatigue.**

# International Standard for maritime Pilot Organizations

## 12.1 General

12.1.1 The pilot organization shall establish and maintain procedures to ensure that nonconformities, incidents, accidents, risk events and complaints are reported, investigated and **analyzed** as necessary with the **objective of improving the management system**.

## 12.3 Analysis

12.3.1 The pilot organization shall have a system for recording, investigating, evaluating, reviewing and **analyzing** reports in order that appropriate action to **achieve improvement** of its management system can be taken.

## 12.4 Continuous Improvement

12.4.1 The organization shall **continually improve** the effectiveness of the management system through the use of policies, objectives, audit results, **analysis of data**, corrective and preventive actions and management review.

# ISPO

## Summary of these requirements

- Manage fatigue and alertness 
- Avoid excessive hours of work  
**What is excessive?**
- Release pilots before they are impaired by fatigue  
**How can we predict? How impaired?**
- Analyze and improve  
**How can we analyze, predict or measure fatigue?**

## ISPO

### We require tools to help us

- Assess the fatigue exposure caused by the hours of work
- Assess risks of working at different levels of fatigue exposure
- Set tolerance targets of fatigue exposure
- Audit and improve

# Humans are Diurnal

**We sleep better at night**

## Circadian Rhythms or Body Clock

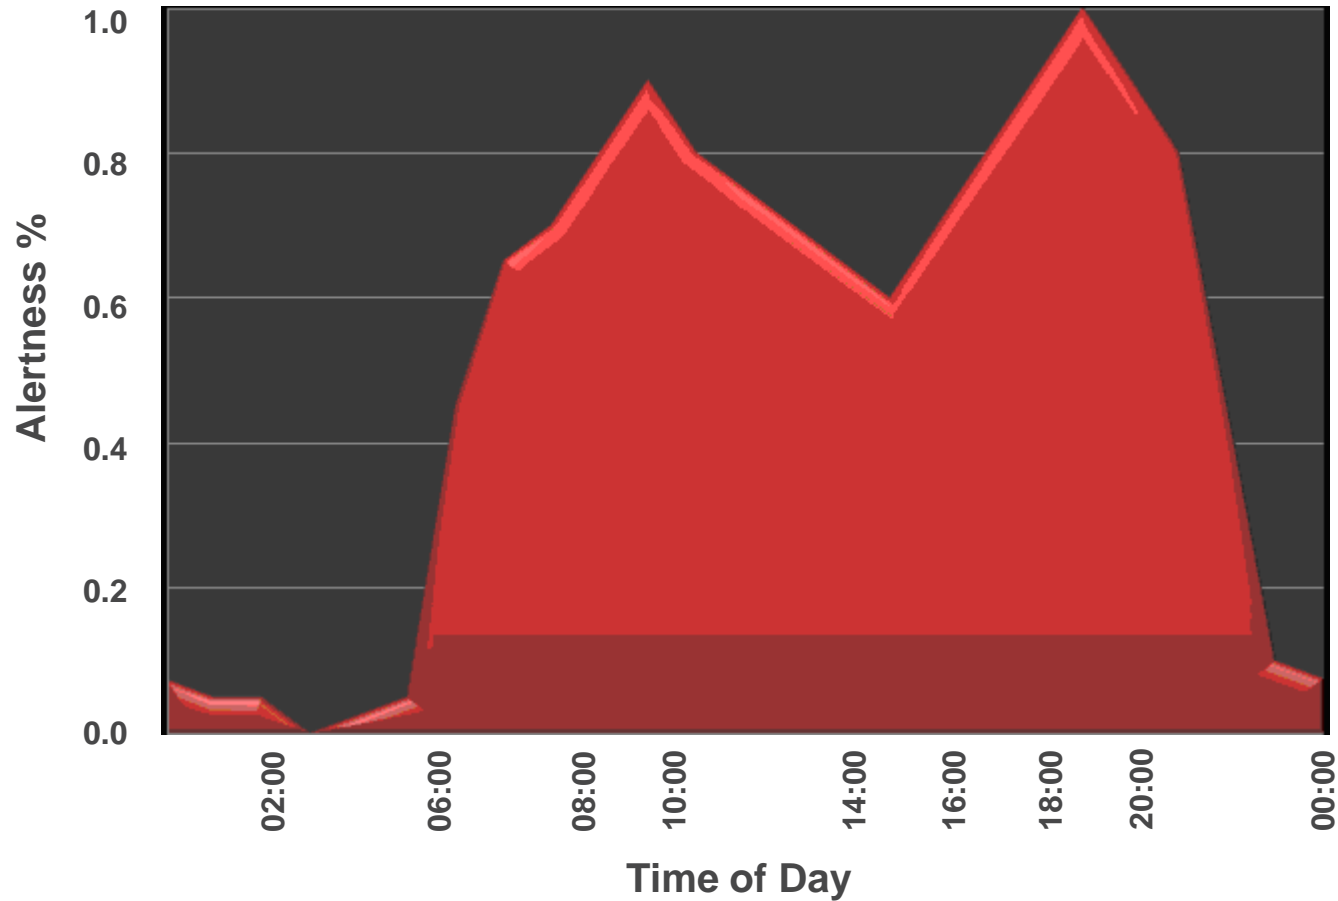

- sleepiness/wakefulness
- digestive enzymes
- hormone production
- body temperature

© Dreamstime.com

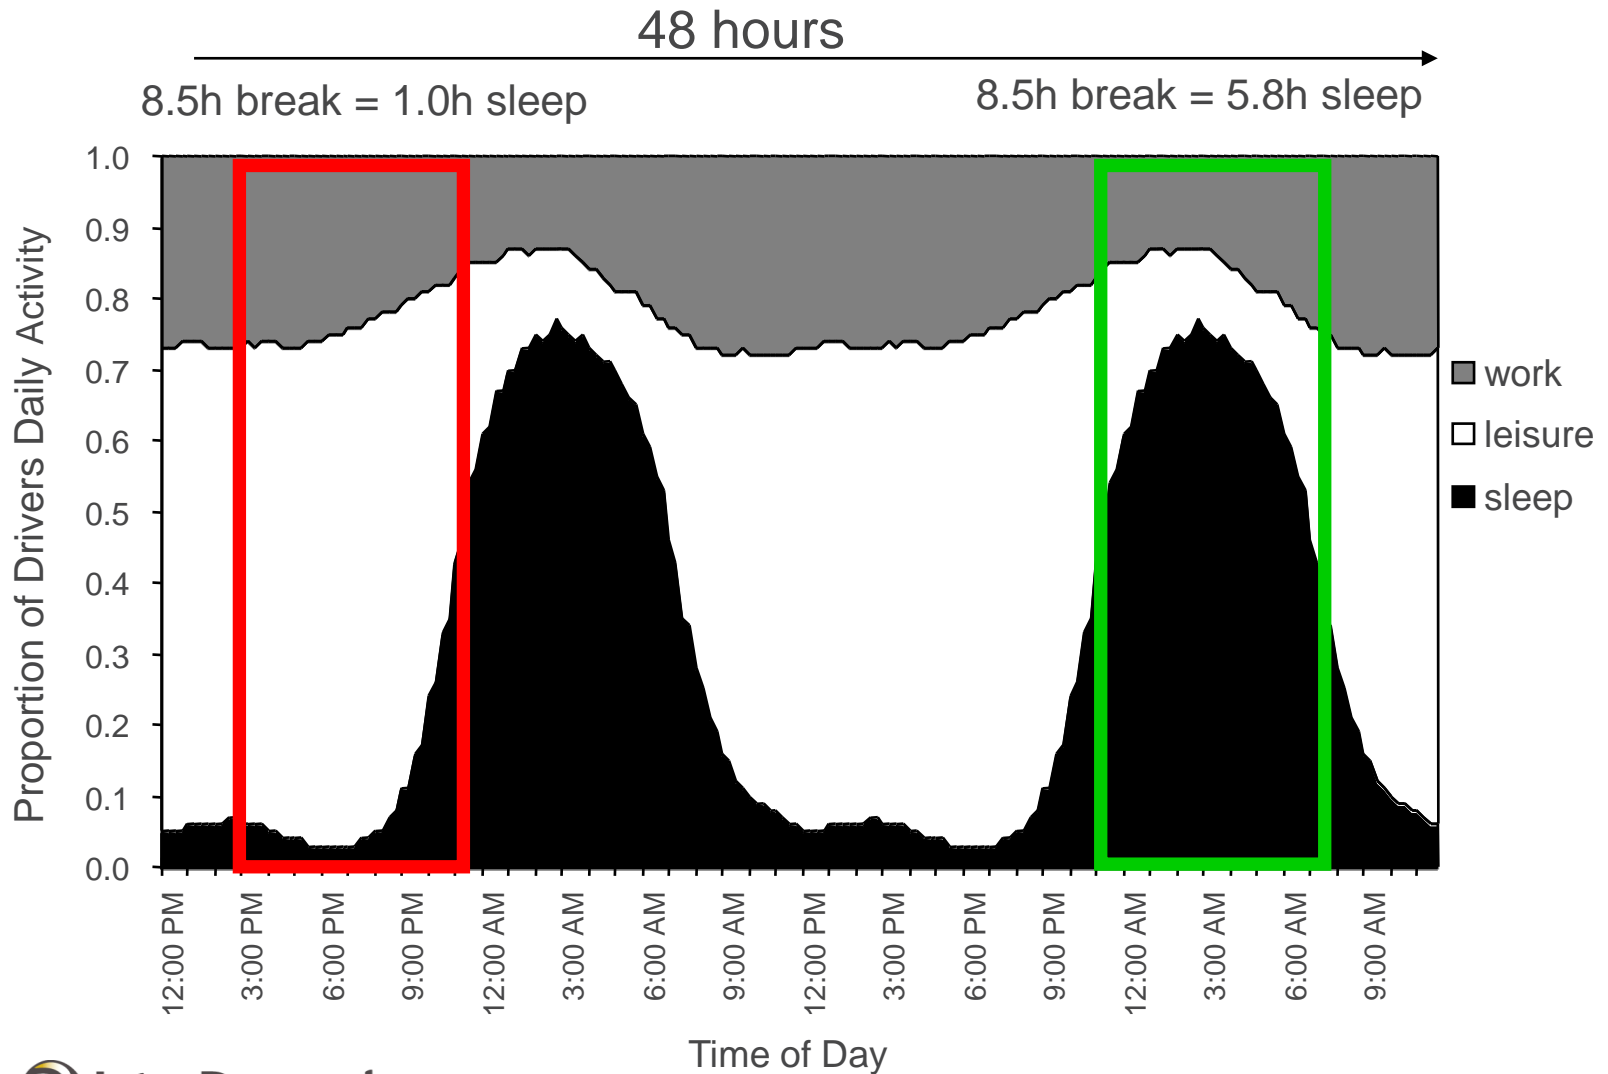

# Circadian Rhythms

Adapted from the studies of Dr. Guilhem Pérémarty

# Day Sleep not as Restorative

# Inadequate sleep deactivates brain regions for cognitive performance & alertness

## In determining Work-related Fatigue Exposure takes into account:

© Duard Van Der Westhuizen | Dreamstime.com

- **Duration** of work & breaks
- **Time of day** of work & breaks
- Work history from **preceding 7 days**
- **Biological limits** on recovery sleep

- Based on concept fatigue is a dynamic balance between **2 competing forces**:
  - Forces which **produce** fatigue
  - Forces that **reverse effects** of fatigue ie recovery
- Assigns a **fatigue** value to **work** periods and a recovery value to **non-work** periods

# Work-related FAID Scores

- Monday to Friday: **9am to 5pm**
  - 40-hour standard work week
  - Peak **FAID Score 40**
- Monday to Friday: **11pm to 7am**
  - 40-hour work week
  - Peak **FAID Score ~95**

Research\* indicates **FAID<sup>®</sup> Scores 80 -100** are equivalent to the predicted level of work-related fatigue achieved after **23-24 hours continuous sleep deprivation**

Result was observed when sleep deprivation started at 8am Monday, following a standard working week - Monday to Friday, 9am-5pm, Saturday & Sunday off

\* Dawson, D. & Reid, K. *Fatigue, alcohol & performance impairment*. Nature July 1997, 388: 235

Performance impairment at such a level of sleep deprivation has been associated with blood alcohol concentration over 0.05%

# Peak FAID Scores

# FAID Quantum

New bio-mathematical model added to FAID in 2015.

The sleep predictor yielded accurate predictions of sleep:

- Model outputs had 85% agreement (15% error rate) with observed sleep and wake times.
- Intra-individual agreement between serial episodes of sleep behaviour in matched rest periods was similarly robust (90%), but nonetheless associated with an intrinsic level of behavioural variation in the order of 10%.
- The scope for improvement in the outputs produced by the sleep predictor model is minor indeed (i.e.,  $15 - 10 = 5\%$ ).

# FAID Quantum

- FAID Quantum predicts amount and timing of likely sleep from work/rest data.
- From the predicted sleep or user supplied sleep data Karolinska Sleepiness Scale (KSS) scores are calculated utilising the Three Process Model.

# Karolinska Sleepiness Scale

9. Extremely sleepy, fighting sleep
8. Sleepy, some effort to keep alert
7. Sleepy, but no difficulty remaining awake
6. Some signs of sleepiness
5. Neither alert nor sleepy
4. Rather alert
3. Alert
2. Very alert
1. Extremely alert

# Work-related FAID Scores

- Monday to Friday: **9am to 5pm**
  - 40-hour standard work week
  - Peak **FAID Score 40**
  - Peak **KSS 4.1**
- Monday to Friday: **11pm to 7am**
  - 40-hour work week
  - Peak **FAID Score ~95**
  - Peak **KSS 8.4**

# Our Risk-Based Approach to Managing Fatigue

## Managing Work-Related Fatigue Risks

**1. Determine:  
Fatigue Risk Profile**

**2. Protect:  
Against Fatigue Risk**

**3. Review:  
System & Occurrences**

## Scope

**Risk Profile of Hours of Work**  
planned, unplanned / overtime,  
actual hours, standby

**Risk Profile of Individual**  
commuting to / from work,  
sleep disorders, lifestyle

**Risk Profile of Job Type / Role**  
time on task, environment,  
demand of task

Adequate treatments / controls  
  
Prepare for emergencies &  
unplanned work,  
Fatigue risk assess changes

Fatigue occurrences, Causal & risk  
factors, Work plans and  
procedures, New information

## Implementation

Diagnostics of planned &  
actual Hours of Work

Review individual  
experience and self  
reports of fatigue

Risk Assessment of  
day-to-day activities in  
the context of fatigue

Fatigue Management Policy,  
plans, procedures  
& operational work instructions  
  
Supporting supervisory, team  
& individual management  
strategies

Review / investigate fatigue  
reports, existing controls,  
business processes & changes

## Supporting InterDynamics Services & Products

FAID® Diagnostic Reports,  
Implementation of FAID Tools,  
Data analysis

Staff surveys,  
Discussion group facilitation,  
Fatigue assessment / monitoring

Fatigue Hazard Analysis (FHA)  
Risk Assessment Workshops  
& Reports

Transition planning & support  
Managing Fatigue education  
Facilitation of Fatigue  
Management Policies, Plans &  
Procedure development,  
FAID Roster Tool / DLL

FRMS review & grading (GRAID™),  
Investigation tools,  
FAID / Hours of Work audits

# Acknowledgement

Sample results from FRMS project conducted  
for:

Rotterdam Marine Pilots

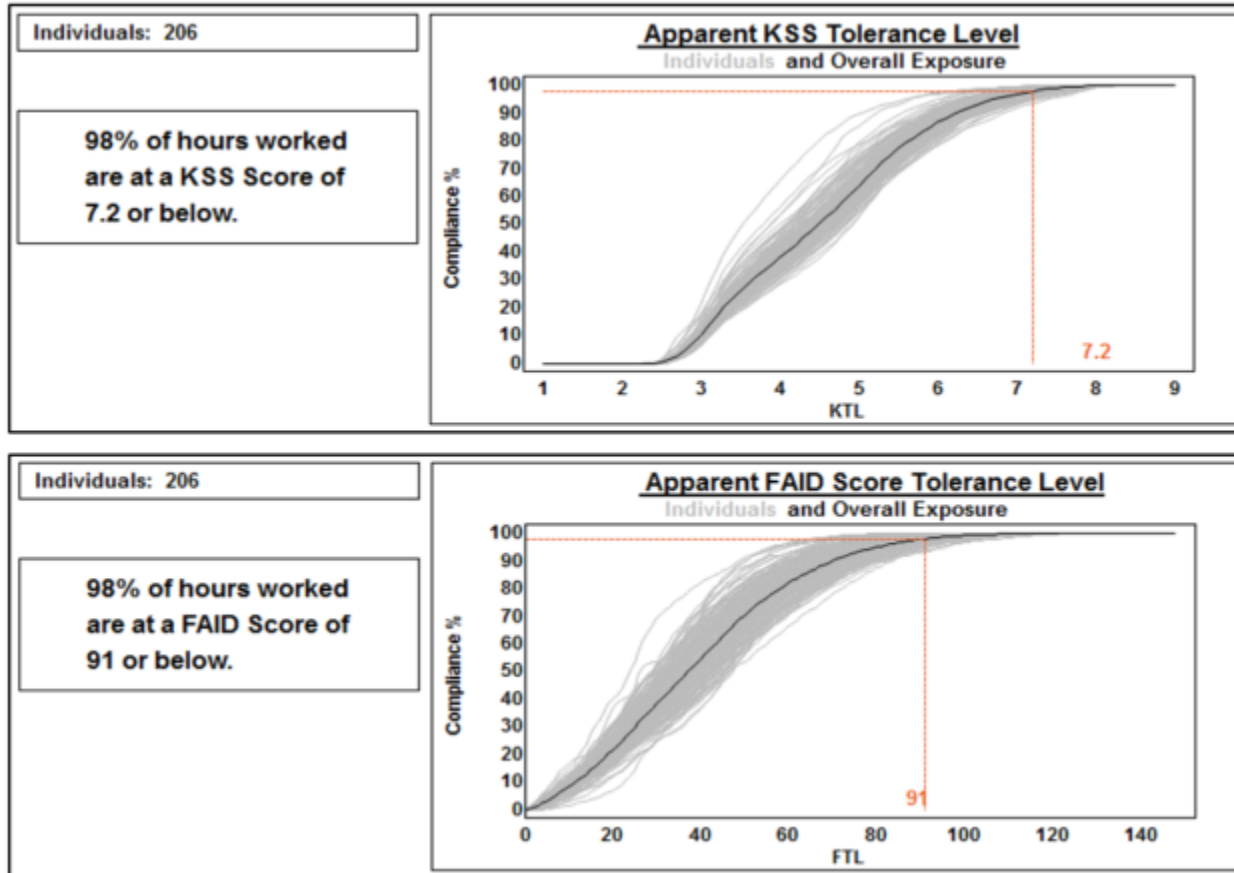

# FAID Diagnostic

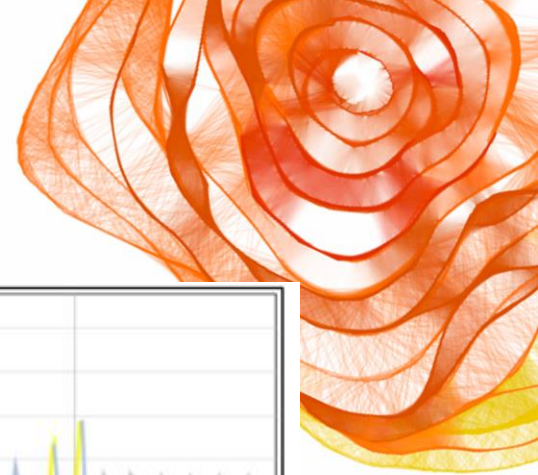

- 206 Rotterdam Marine Pilots
  - 104 - Pilots who worked the 7-7 roster pattern
  - 107 - Pilots who worked the 5-5-4 roster pattern
- 52 weeks of actual worked hours

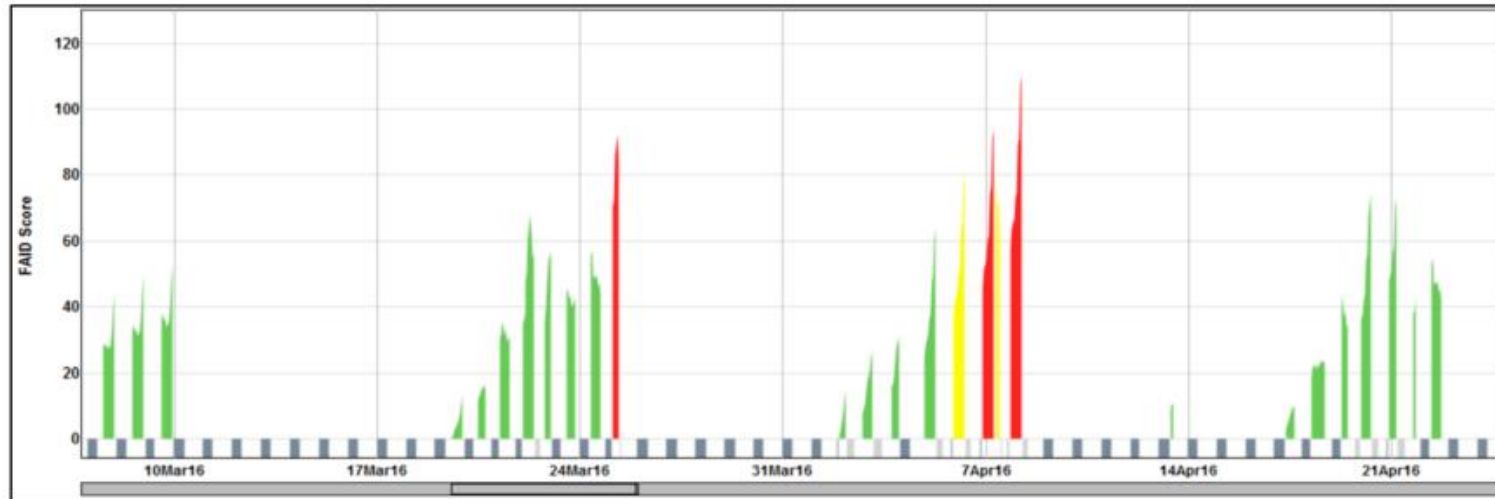

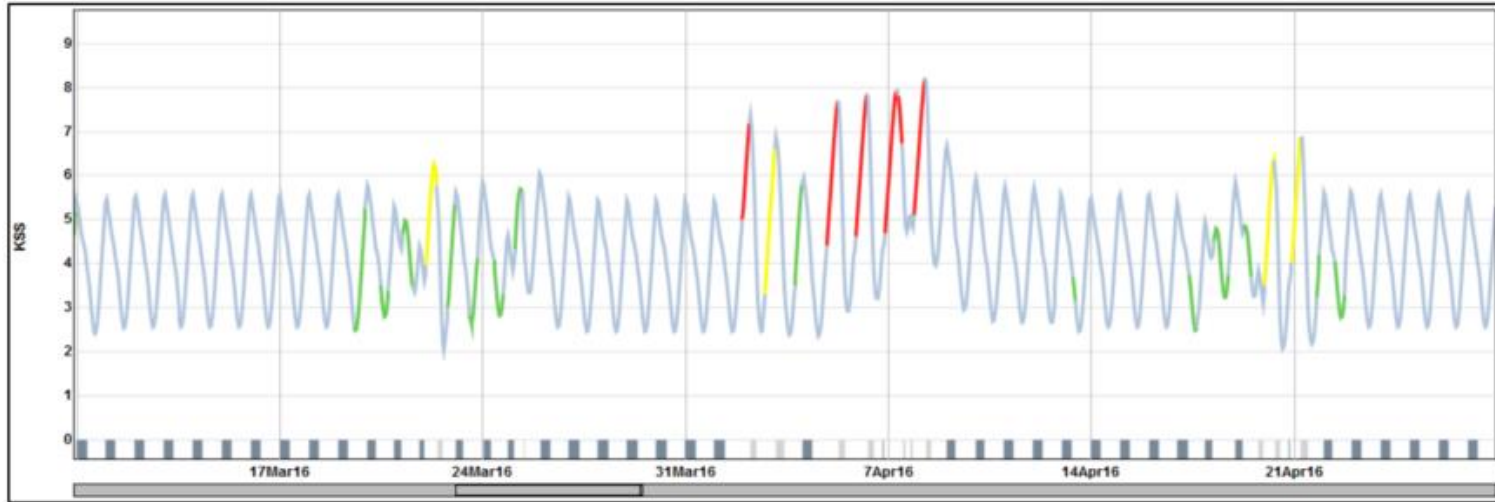

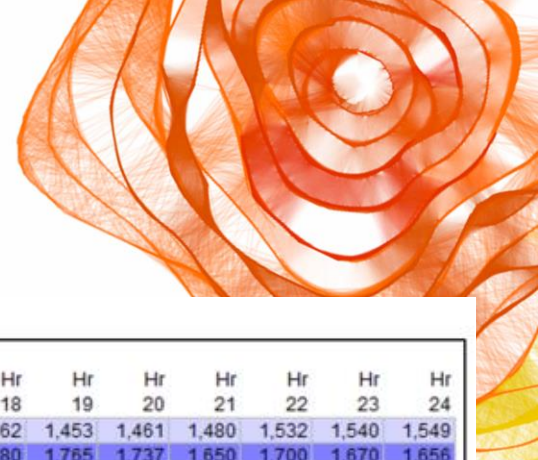

# FAID Diagnostic

# Managing Fatigue Survey

As well as being a vital staff engagement tool, the questionnaire provides a practical mechanism that:

- Captures an individual's approach to fatigue management.
- Explores current sleeping conditions and coping strategies.
- Reveals work and non-work related inhibitors to achieving quality sleep.
- Allows staff to comment on the organisation's current strategies.
- Assesses engagement with the company's FRMS policies and procedures.

The web based anonymous survey takes 10 minutes.

The collated results help inform action plans, operational practices and internal communications.

# 177 Participants

## *Typical Loodswezen Pilot*

- Male
- Age – 40s
- Married with dependents
- Drives to/from work in a car (usually takes less than 30mins)
- Generally does not take breaks during commute
- Seldom, if ever, experiences problem fatigue during commute
- Does not spend multiple days away from home while working

## **NOTE**

185 or 87% of the 213 pilots responded

161 or 76% have completed the whole questionnaire

# GRAID FRMS

# Fatigue Hazard Analysis

A facilitated workshop of experienced staff achieve the following:

- **Identify** key operational tasks that present the greatest fatigue-related **risks**.
- Create a **Hazard Catalogue** and assign risk likelihood and consequence ratings for the task hazards.
- Derive or document the corporate **risk tolerance boundary**.
- Develop risk **improvement actions** for the highest-risk hazards.
- Determine an hours of work **Fatigue Tolerance Level** (FTL) for the role, taking into account the fatigue-related risks assessed and other relevant information presented at the workshop.
- Assist or support management in **reducing fatigue-related risks**.

# Fatigue Hazard Analysis

**Legend**

| SEVERITY |              |
|----------|--------------|
|          | Category     |
| I        | Catastrophic |
| II       | Hazardous    |
| III      | Major        |
| IV       | Minor        |
| V        | Negligible   |

| PROBABILITY |                                  |
|-------------|----------------------------------|
|             | Level                            |
| A           | Extremely Improbable / Unlikely  |
| B           | Improbable / Known               |
| C           | Remote / Known Occurrence        |
| D           | Occasional / Frequent Occurrence |
| E           | Regular / Certainty              |

# Our Risk-Based Approach to Managing Fatigue

## Managing Work-Related Fatigue Risks

**1. Determine:  
Fatigue Risk Profile**

**2. Protect:  
Against Fatigue Risk**

**3. Review:  
System & Occurrences**

## Scope

**Risk Profile of Hours of Work**  
planned, unplanned / overtime,  
actual hours, standby

**Risk Profile of Individual**  
commuting to / from work,  
sleep disorders, lifestyle

**Risk Profile of Job Type / Role**  
time on task, environment,  
demand of task

Adequate treatments / controls  
  
Prepare for emergencies &  
unplanned work,  
Fatigue risk assess changes

Fatigue occurrences, Causal & risk  
factors, Work plans and  
procedures, New information

## Implementation

Diagnostics of planned &  
actual Hours of Work

Review individual  
experience and self  
reports of fatigue

Risk Assessment of  
day-to-day activities in  
the context of fatigue

Fatigue Management Policy,  
plans, procedures  
& operational work instructions  
  
Supporting supervisory, team  
& individual management  
strategies

Review / investigate fatigue  
reports, existing controls,  
business processes & changes

## Supporting InterDynamics Services & Products

FAID® Diagnostic Reports,  
Implementation of FAID Tools,  
Data analysis

Staff surveys,  
Discussion group facilitation,  
Fatigue assessment / monitoring

Fatigue Hazard Analysis (FHA)  
Risk Assessment Workshops  
& Reports

Transition planning & support  
Managing Fatigue education  
Facilitation of Fatigue  
Management Policies, Plans &  
Procedure development,  
FAID Roster Tool / DLL

FRMS review & grading (GRAID™),  
Investigation tools,  
FAID / Hours of Work audits
